Angry Pixel user puts up anti-Google posters in town, slams company's aftersales service

The Pixel user was dissatisfied with the repairs and Google's customer support service in India. He eventually expresses his displeasure with anti-Google posters. Frustrated with the poor service, Aggarwal took to Twitter to express his anger about the issue. As with all other customers, Google reached out to him with a promise of fixing the issue. However, the issue was never sorted out and despite repeated calls and messages to Google, the faults on his Pixel device persisted. Read the full article [here](#).

Voice-assistants taking over? Amazon has sold over 100 million Alexa devices

Amazon has announced that it has sold over 100 million devices with its Alexa smart assistant built-in. During the holiday season, sales of Amazon Echo Dot devices exceeded expectation and nearly one million people signed up to receive invites to buy the Echo Auto- a dash-mounted Alexa-enabled device for any car, Cnet reported. Intel's latest chip is designed for computing at the edge

-By Syed Umamuddin (B.Sc. honours Mathematics) 1st year

As we develop increasingly sophisticated technologies like self-driving cars and industrial internet of things sensors, it's going to require that we move computing to the edge. Essentially this means that instead of sending data to the cloud for processing, it needs to be done right on the device itself because even a little bit of latency is too much.

Intel announced a new chip today, called the Intel Xeon D-2100 processor, to help customers who want to move computing to the edge. It's part of an effort by the chip giant to stay ahead of emerging technology trends like edge computing and the Internet of Things.
